

# TSL Hospital Management System (HMS)

Patient Management | Hospital Management

**The TSL Hospital management system (HMS)** is a web based app that helps manage information related to health care and aids in the job completion of health care providers effectively. The HMS serves as a platform where all hospital data is kept and internal processes are simplified reducing clutter and loss of information.

## COLLECT CUSTOMER INFORMATION/DATA

Collect Patient Bio Data.. Based on the hospitals request we can customize the fields or the data you want to collect. Examples of data the hospital can collect are:

- *Name*
- *Email*
- *Phone Number*
- *Height*
- *Weight*
- *Address*
- *Blood Type*
- *Known Ailments*

## Store Appointments / Visits Information

Collect and store information when patients visit the hospital. These visits are tied to a patient for easy retrieval of these visits. When creating appointments there are a number of things the doctor /nurse can do or request.

These include:

- *Making a Lab Request to the Lab Team*
- *Make a Pharmacy Request to the Pharmacy*
- *Admit a Patient*
- *Set a reminder for Patients Next Appointment Date*
- *Describe Patients Issue*

## MANAGING LAB REQUESTS

Lab requests can be automatically created by Doctors while filling in Appointment information or by manually creating them in the Requests Module. When lab requests are made the lab technicians fill in the lab request with the appropriate information / results. When they are done they close the request which can either :

- *Trigger a Mail to the patient with results*
- *Send Results to the Doctor or Nurses who can contact the patient with their results*

The Doctor/Nurse then views the results and proceeds with treatment of the patient from there by creating a New appointment or recommends drugs to the patient

## MANAGING PHARMACY REQUESTS

Pharmacy requests can be automatically created by Doctors while filling in Appointment information or by manually creating them in the Requests Module. When pharmacy requests are made the pharmacists fill in the request with the drugs the patients bought and the drugs the patient did not buy. When they are done they close the request.

## **APPOINTMENTS/REMINDERS**

Appointments can be automatically scheduled by Doctors/Nurses while filling in Appointment information or by manually creating them in the Calender Module. When appointments are created, there is a Widget on the Dashboard that displays appointments two days by default(or any set number of days) before the patients next appointment so the Nurses can send a reminder to the patients

## EMAIL INTEGRATION

Send patients or employees emails via the HMS. Emails can be automated or sent manually. Examples of activities emails can be automated for are:

- *Sending appointment reminders to Patients*
- *Sending Nurses/Doctors emails when lab requests are completed*
- *Sending Prescribed Drugs to Patients*
- *Sending Lab Results to Patients*
